This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

NEPAL AND TIBET,

PRESENTED BY

B. H. HODGSON, ESQ.,

TO THE

BRITISH MUSEUM.

SECOND EDITION.

LONDON:
PRINTED BY ORDER OF THE TRUSTEES.
1863.

PRINTED BY TAYLOR AND FRANCIS,
RED LION COURT, FLEET STREET.

PREFACE.

The first edition of the present Catalogue contained a list of those specimens of Mammals and Birds collected by Mr. Hodgson during his residence in Nepal, and presented by that gentleman to the British Museum prior to the publication of that Catalogue in 1846. They are the types of the specimens described in various scientific papers by Mr. Hodgson.

In the present Catalogue is added to the matter of the former edition, now out of print, a list of the additional specimens of Mammals and Birds collected by Mr. Hodgson in Nepal, and of Drawings made in that country under his supervision, which were presented to the Museum in May 1858.

A list of the Reptiles and Fishes in the above Collections is also contained in the present Catalogue.

The following is Mr. Hodgson's account of the Collection:—

"*Lists of Drawings of my Birds*, A.D. 1857, *December* 20, ~~*packed in one great chest of wood*~~

"There are 982 numbers to the Drawings representing species, and corresponding to the numbers of the Bird Catalogue, and each bird has a number attached to the Drawing. But these 982 numbered Drawings include

separate delineations of the sexes and young of some of the species. They are drawn upon 1207 sheets of paper, including originals and copies, finished and unfinished. The originals are on 1025 sheets of paper, the copies on 182 sheets. (N.B. The originals, *quoad* sheets, have exceeded 982 *supra*, because several sheets that had at first 2 or 3 species have now also sheets appropriated to one of such species.)

"Of copies to make the count full, observe that about 806 sheets were taken to England in 1843 and presented to the British Museum; add to these 806 the present 182 sheets of copies, and the wholly new species which have been since drawn, and the count becomes full. There are 37 sheets in the above which are of new subjects, and uncopied now or formerly: thus,

Copies formerly sent	806
Copies forthcoming	182

which would give the full number of copies of the 1025 sheets of originals.

"Add, unnumbered, 5 sheets of Birds sent to me by Jung Bahadur. These are in excess of the 1207 sheets, and make, in all, 1212 sheets.

"*List of Bird Osteology.* drawings.

"17 sheets of the breast-bones of Birds, numbered to answer to numbers on Drawings. Lastly, 17 sheets of parts of Birds, as bill, talon, &c.

"*List of Drawings of Quadrupeds, &c.*

animals: of the skulls, organs, limbs, &c., of the above, 110 sheets. Add two animals sent by Jung Bahadur (with above birds), and also four sheets of Ethnology, being originals and copies of the Lepcha priesthood in costume (Bijua and Bonthing in that tongue).

"In the same box with the above are two volumes of MS. descriptions of the Quadrupeds and eight volumes of descriptions of the Birds, done by my people at Darjiling; also the Buddhist drawings of Nepal and Tibet (according to list elsewhere), with the original explanations of them by Amṛta Nanda, the latter in distinct packet and bundle*; also two bundles of MS. (bound and loose) of descriptions, done in Nepal by myself and Campbell, chiefly anatomy, and descriptions of manners and habits, chiefly by my people in Nepal. (There are, on the backs of most of the original drawings of birds and beasts, memoranda by myself.)

"Packed in the same large wooden box are all my Buddhist drawings* and papers, and descriptions of them (in separate bundle), according to separate list; the Buddhist drawings on cloth being made up into a long roll covered with wax cloth.

A coloured drawing and a pencil sketch of the head.

31. CATLA BUCHANANI. The CUTLER.
Cyprinus catla, *Buch. Ham. Fish. Gang.* p. 287. pl. 13. f. 81. Catla Buchanani, *Cuv. & Val.* xvii. p. 411. pl. 515.
Two coloured drawings.
The vernacular name, assigned by Mr. Hodgson to this well-known species, is evidently the same as that which is written "*Catla*" by Buchanan.

32. CHATOËSSUS MANMINA.
Clupanodon manmina, *Buch. Ham. Fish. Gang.* p. 247.
Chatoëssus manmina, *Cuv. & Val.* xxi. p. 114.
One specimen.

Fam. 13. ANGUILLIDÆ.

33. LIURANUS, sp.?
One coloured drawing.

34. ANGUILLA BENGALENSIS.
Murænа maculata, *Buch. Ham. Fish. Gang.* p. 23 (nec syn.). M. bengalensis, *Gray, Ind. Zool.* Anguilla variegata, *M'Clell. Calc. Journ. Nat. Hist.* v. p. 179. pl. 5. f. 2. Anguilla Elphinstonei, *Sykes, Trans. Z. S.* ii. p. 377. pl. 67. f. 3.
One coloured drawing.

35. ANGUILLA, sp.
One coloured drawing.
We are much inclined to consider the fish represented as a mere variety of *A. bengalensis*, with which it entirely agrees in its form, except that it appears to have a wider cleft of the mouth, extending far behind the orbit. From the purplish colour, variegated with white and black specks, Mr. Hodgson calls it the "Purple Eel," "*A. porphyrea.*" The drawing is 14 inches long, and stated to be one-third of the natural size. The specimen was caught in the month of April in the Rosi Khola, a clear hill-stream of the central region of Nepal.

THE END.
